

# Large uniform batches of high quality

*Tilia cordata 'Greenspire'*

Excellent cultivars and rapid delivery of large, uniform batches is one of the specialities of Van den Berk Nurseries. Our range currently includes more than 500 different varieties and cultivars that we can supply in surprisingly large quantities.

## Positive tree development

The many large, uniform batches that can be supplied from our nursery are of excellent quality. The source material from stringently selected suppliers is planted and cultivated in our fertile nursery soil. During a period of several years, the trees grow under the expert supervision of our experienced staff into sizes that can be sold. Van den Berk has drawn up a quality guarantee that ensures the quality of the rootballs. The actions are geared to the positive development of trees and are based on extremely large planting distances. Both the underground and aboveground parts must be able to develop as well as possible. After all, the products must be in perfect condition in order to decorate the new location optimally.

*Taxus baccata*

*Tilia cordata 'Greenspire'*

*Amelanchier lamarckii*
