

More possible with multi-trunk trees

Multi-trunk trees have several trunks that start at ground level. This gives them a whimsical and natural look. A beautiful effect is created by illuminating the plant with spotlights in the evening. This presents the characteristic silhouette even more dramatically. Multi-trunk trees and shrubs are available in a great many types and sizes. Their application is also versatile: as solitary eye-catchers or in playful groups. Multi-trunk trees will invigorate your garden or project!

Acer rubrum

Amelanchier lamarckii

Enkianthus campanulatus

Betulus utilis 'Jacquemontii'

Acer campestre

Cornus officinalis

From left to right:
Ailanthus altissima,
Catalpa bignonioides,
Juglans regia,
Acer saccharinum
'Laciniatum Wierii'
