

## Picea pungens 'Glaucia Globosa'

|                              |   |
|------------------------------|---|
| <b>Height</b>                | 1-2 m   |
| <b>Width</b>                 | 1-2m  |
| <b>Crown</b>                 | flatened spherical, dark, dense crown   |
| <b>Bark and branches</b>     | brown, grey   |
| <b>Leaf</b>                  | grey-green, blue-green, evergreen   |
| <b>Flowers</b>               | inconspicuous, flowers in May   |
| <b>Fruits</b>                | hanging cylindrical cones, 4 - 10 cm long                                     |
| <b>Spines/thorns</b>         | None  |
| <b>Toxicity</b>              | usually not toxic to people, (large) pets and livestock                       |
| <b>Soil type</b>             | clayed soil, loamy soil, sandy soil, acid soil, calcareous soil               |
| <b>Soil moisture</b>         | suitable for dry soil   |
| <b>Paving</b>                | tolerates no paving   |
| <b>Winter hardiness zone</b> | 4 (-34,4 to -28,9 °C)   |
| <b>Other resistances</b>     | resistant to frost (WH 1 - 6)   |
| <b>Fauna tree</b>            | resistant to frost (WH 1 - 6), provides food for birds                        |
| <b>Application</b>           | tree containers, roof gardens, industrial areas, small gardens, patio gardens |
| <b>Shape</b>                 | clearstem tree, specimen conifer  |

Picea pungens 'Glaucia Globosa' is a shrub form with an irregular, bulbous to flattened spherical growth habit. Does not usually grow much higher than about 2 m. Twigs yellowish brown, older branches and bark greyish brown to blackish grey. The stiff sharply pointed needles are blue-grey. Needle colour is less intense than in cultivars such as 'Erich Frahm' and 'Hoopsii'. The needles are close together giving the plant a very dense and compact appearance. Suitable for use in gardens, parks, planters, cemeteries, etc. 'Glaucia Globosa' was grown in 1937 by Anth. Kluys in Boskoop as a seedling. Only from 1955 was the plant distributed. Hardiness zone: 4
