

Taxus baccata f. aurea

Height	5-8 m
Width	3-4m
Crown	broad ovoid, dark, dense crown
Bark and branches	flaking, reddish brown
Leaf	yellow, evergreen
Flowers	yellow, flowers in April
Fruits	red
Spines/thorns	None
Toxicity	has toxic components
Soil type	clayed soil, loamy soil, sandy soil, acid soil, calcareous soil
Paving	tolerates no paving
Winter hardiness zone	6b (-20,5 to -17,8 °C)
Wind resistance	good
Other resistances	resistant to frost (WH 1 - 6), can withstand wind
Fauna tree	resistant to frost (WH 1 - 6), can withstand wind, provides food for birds
Application	tree containers, roof gardens, industrial areas, small gardens, patio gardens
Shape	specimen conifer

A medium-size tree with an ascending to broad ascending crown. This natural form is propagated by seeding so the trees have a variety of crown shapes, foliage colour and sex. The twigs are brown and the old bark is brown-red with deep grooves and flaking. The needles range from intense yellow to green-yellow. The tree can be either male or female. The female trees can bear a lot of fruit. These consist of elliptical brown-black seeds that are largely enclosed by a fleshy red aril. Broad park tree for any well-drained soil. Tolerates heavy pruning and is perfect for hedges and other shapes.
