

Acer campestre 'Anny's Globe'

Height	3-5 m
Width	2-3m
Crown	round/spherical, dark, dense crown
Bark and branches	grey
Leaf	palmately lobed with (3) 5 lobes, about 10 cm long and broad, dark green
Autumn colour	yellow
Flowers	yellowgreen, flowers in May
Fruits	redgreen, inconspicuous
Spines/thorns	None
Toxicity	usually not toxic to people, (large) pets and livestock
Soil type	all
Soil moisture	suitable for dry soil
Paving	tolerates partial paving
Winter hardiness zone	5 (-28,8 to -23,4 °C)
Wind resistance	good/very good
Other resistances	resistant to frost (WH 1 - 6), can withstand wind, resistant to de-icing salt
Fauna tree	resistant to frost (WH 1 - 6), can withstand wind, resistant to de-icing salt, valuable for butterflies
Application	narrow streets, tree containers, roof gardens, coastal areas, industrial areas, small gardens, patio gardens
Shape	clearstem tree

Acer campestre 'Anny's Globe' is a bulbous growing cultivar, usually grafted on a tall stem. The tree grows slowly and will develop a densely branched, compact, almost spherical crown. Eventually, 'Anny's Globe' reaches a height of 3 - 5 m. Depending on the graft height, the final height may vary slightly. Has the same characteristics as the species (see A. campestre), but 'Anny's Globe' is smaller in all parts and hardly suffers from mildew or spider mites. In autumn, the leaves turn golden yellow before falling off. Because of its small crown size, this cultivar is extremely suitable for use in tree boxes, roof gardens, (small) gardens, parks and small-scale green projects. The fact that this tree tolerates dry soil and semi-paved areas and can stand in full sun increases its application possibilities. 'Anny's Globe' was selected as a seedling of 'Eco Sentry' by André van Nijnatten from Zundert in 1993. Hardiness zone: 5
