

Liriodendron tulipifera

'Aureomarginatum'

Height	20 - 25 (35) m
Width	10-15m
Crown	oval, half-open crown
Bark and branches	light grey bark, branches reddish-brown
Leaf	4-lobed, green with yellow edge, 8 - 15 cm long, 9 - 18 cm wide
Autumn colour	yellow
Flowers	tulip-shaped, green with yellow and orange, June/July
Fruits	conical fruits up to 10 cm long
Spines/thorns	None
Toxicity	usually not toxic to people, (large) pets and livestock
Soil type	humid and rich
Paving	tolerates paving
Winter hardiness zone	5b (-26,0 to -23,4 °C)
Wind resistance	good
Other resistances	resistant to frost (WH 1 - 6), can withstand wind
Fauna tree	resistant to frost (WH 1 - 6), can withstand wind, valuable for butterflies
Application	avenues and broad streets, industrial areas
Shape	clearstem tree, feathered tree
Origin	Germany, 1865

This cultivar grows more slowly than the species and has a narrower crown that later widens. The trunk is grey and, when older, develops shallow grooves: the young twigs are greenish-grey, later reddish-brown. The leaves are 4-lobed and the top is straight to incised with a shallow V. Each leaf has a wide greenish-yellow edge that turns light green in the course of the summer. The leaves have a bluish-green underside and they turn yellow in the autumn. The flowers appear after the emergence of the leaves. They have a green exterior and a yellow plus orange interior. They are approx. 4 cm long and 6 cm broad. The conical fruit consists of many winged nutlets pressed together in a spiral. Deep loose soil is required because of the deeply penetrating fleshy taproot.
