Parrotia persica 'Bella'

Paving	
Soil moisture	suitable for dry soil, withstand short flood
Soil type	loamy soil, sandy soil, peaty soil, nutrient-poor soil, acid soil
Toxicity	usually not toxic to people, (large) pets and livestock
Spines/thorns	None
Fruits	spiked capsule, about 1 cm
Flowers	red, flowers in February-march
Autumn colour	yellow, orange, red, purple
Leaf	oval to obovate, 7-10 cm long, glossy dark green
Crown Bark and branches	oval, half-open crown, capricious growing twigs olive brown, bark light gray with (purple) brown spots, smooth
Width	3-5m
Height	8-10 m

'Bella' is a good-growing, small to medium-sized tree growing 8-10 m tall. Whereas the species P. persica tends to have an irregularly shaped crown, this is much less the case with 'Bella'. This is caused by the well-through heart branch. The twigs and older bark have the same beautiful colours as P. persica. The foliage turns deep red in spring. In summer it is a glossy dark green and already towards the end of the summer it starts to turn red again, before turning deep purple to purple in autumn. The flowering too is like P. persica. In itself not spectacular, but because the tree already flowers in February-March, i.e. before the leaves develop, the red flower bundles do stand out.
