Prunus incisa 'Kojou-no-mai'

leight	
	1-3 m
lidth	1-3m
rown	round/spherical, half-open crown
ark and branches	brown, grey
eaf	green
utumn colour	orange, red
lowers	light pink, flowers in March-April
pines/thorns	None
oxicity	usually not toxic to people, (large) pets and livestock
oil type	all
aving	tolerates no paving
/inter hardiness zone	6b (-20,5 to -17,8 °C)
/ind resistance	moderate
ther resistances	resistant to frost (WH 1 - 6)
auna tree	resistant to frost (WH 1 - 6), valuable for bees (honey plant)
pplication	small gardens, patio gardens
hape	clearstem tree, multi-stem treem
lowers pines/thorns oxicity oil type aving /inter hardiness zone /ind resistance	light pink, flowers in March-April None usually not toxic to people, (large) pets and livestock all tolerates no paving 6b (-20,5 to -17,8 °C) moderate resistant to frost (WH 1 - 6)

'Kojou-no-mai' is a relatively slow-growing large shrub that eventually grows about 3 m tall and wide. The thin twigs have a distinct zigzag structure. The leaves are ovate with the typical long pointed tip that all P. incisa have. Autumn colours are beautiful orange to red. Flowers open from early March to early April, depending on temperature. The flower buds are pale red and the opened flowers are pale pink with a darker centre, which darkens as the flower ages. The fine plant structure is enhanced by the delicate blossom of 'Kojou-no-mai'.

'Kojou-no-mai' is fine for use in gardens, parks, cemeteries, etc. In summer it is an inconspicuous plant, but during flowering and also when the leaves are in autumn colour, the plant shows its full ornamental value.

Was found in the wild before 1985 by Japanese Shizuo Akaike, on the flanks of Mount Fuji. Hardiness zone 6b.
