## Quercus palustris TREEVOLUTION® 'Woodside Splendor'

12-15m
broad conical, later round, half-open crown
twigs olive green, bark grey, smooth to shallow grooved
ovate to oval, roughly lobed, glossy dark green, 7 - 15 cm
red
golden coloured catkins, May
flat-topped spherical, approx. 1 cm
None
usually not toxic to people, (large) pets and livestock
any, preferably fertile
suitable for wet soil
tolerates no paving
5a (-28,8 to -26,1 °C)
good
resistant to frost (WH 1 - 6), can withstand wind, resistant to de-icing salt
resistant to frost (WH 1 - 6), can withstand wind, resistant to de-icing salt, provides food for birds
avenues and broad streets, industrial areas
clearstem tree
Van den Berk Tree Nursery, Sint-Oedenrode, the Netherlands, 2015
t c r g f N L a s t c

A reasonably vigorously growing tree with a straight trunk and beautiful, horizontal branching pattern. The crown has a regular, broad conical shape, later round. The lower branches may sag somewhat after time. The young twigs are olive coloured. The older branches and bark are grey. The bark is smooth to shallow grooved. The leaf is 7 to 15 cm long, sometimes the same width and somewhat variable in shape. It is roughly lobed to around halfway along the leaf blade, with 2 to 4 sharply serrated lobes. It is glossy dark green, turning deep red every autumn.

The tree holds on to its foliage in autumn longer than the species. Grows in almost any soil, tolerates air pollution and wet soil
