

Sorbus latifolia 'Atrovirens'

Height	8-10 m
Width	6-10m
Crown	broad conical, half-open crown
Bark and branches	grey
Leaf	green, white
Flowers	cream white, flowers in May
Fruits	yellow, orange, red, brown
Spines/thorns	None
Toxicity	usually not toxic to people, (large) pets and livestock
Soil type	loamy soil, sandy soil, nutrient-poor soil
Soil moisture	suitable for dry soil
Paving	tolerates paving
Winter hardiness zone	5a (-28,8 to -26,1 °C)
Wind resistance	good
Other resistances	resistant to frost (WH 1 - 6), can withstand wind
Fauna tree	resistant to frost (WH 1 - 6), can withstand wind, provides food for birds
Application	avenues and broad streets, industrial areas
Shape	clearstem tree

A frequently used, robust and fast-growing cultivar of *S. latifolia* with a broad pyramidal and remarkably symmetrical crown. Height up to 10 m. The grey trunk is smooth and the young twigs are reddish-brown with white hairs. The broad ovoid to almost round and sturdy leathery leaves are glossy dark green. On the underside they are felt-like and yellowish-grey. The young emerging leaves also bear white felt-like hairs. They remain smaller than those of the species and remain hanging on the tree for a long time in the autumn. In late May the cream-coloured flowers appear and are followed in late summer by numerous brownish-red to orange-yellow fruits. Reasonably resistant to bacterial fire blight and very wind-resistant. Winter hardiness zone: 5a
