

Malus toringo 'Scarlett'

Width	4-5m
Spines/thorns	None
Toxicity	usually not toxic to people, (large) pets and livestock
Paving	tolerates paving
Winter hardiness zone	5a (-28,8 to -26,1 °C)
Other resistances	resistant to frost (WH 1 - 6), can withstand wind
Fauna tree	resistant to frost (WH 1 - 6), can withstand wind, provides food for birds
Application	narrow streets, tree containers, roof gardens, industrial areas, small gardens, patio gardens
Shape	clearstem tree, multi-stem treem
Synonyms	Malus sieboldii

Malus toringo 'Scarlett' is a cultivar of the wild ornamental apple species Malus toringo, distinguished by its double dark pink flowers. Unlike the single white blossoms of the wild species, 'Scarlett' has striking cascading double flowers in a dark pink hue. This creates a particularly decorative effect in spring. Besides the remarkable flowering, Malus toringo 'Scarlett' also produces slightly larger red fruits than the wild species. The compact, upright growth form with dark green shiny leaves is similar, but the double dark pink blooms make 'Scarlett' a significant improvement over the basic genotype. This cultivar of Malus toringo is widely used in public green spaces and private gardens because of its ornamental value. Its height of around 4 metres also makes 'Scarlett' suitable for smaller urban gardens. It is a proven, strong selection that is less susceptible to disease than many other ornamental apples. For landscapers and gardeners, Malus toringo 'Scarlett' is a recommended variety to enrich the range with a reliable, decorative ornamental apple. Its striking spring blooms are a real asset for public green spaces and private gardens.
