Picea pungens 'Glauca Globosa'

Height	1-2 m
Width	1-2m
Crown	flatened spherical, dark, dense crown
Bark and branches	brown, grey
Leaf	grey-green, blue-green, evergreen
Flowers	inconspicuous, flowers in May
Fruits	hanging cylindrical cones, 4 - 10 cm long
Spines/thorns	None
Toxicity	usually not toxic to people, (large) pets and livestock
Soil type	clayed soil, loamy soil, sandy soil, acid soil, calcareous soil
Soil moisture	suitable for dry soil
Paving	tolerates no paving
Winter hardiness zone	4 (-34,4 to -28,9 °C)
Other resistances	resistant to frost (WH 1 - 6)
Fauna tree	resistant to frost (WH 1 - 6), provides food for birds
Application	tree containers, roof gardens, industrial areas, small gardens, patio gardens
Shape	clearstem tree, specimen conifer

Picea pungens 'Glauca Globosa' is a shrub form with an irregular, bulbous to flattened spherical growth habit. Does not usually grow much higher than about 2 m. Twigs yellowish brown, older branches and bark greyish brown to blackish grey. The stiff sharply pointed needles are blue-grey. Needle colour is less intense than in cultivars such as 'Erich Frahm' and 'Hoopsii'. The needles are close together giving the plant a very dense and compact appearance. Suitable for use in gardens, parks, planters, cemeteries, etc. 'Glauca Globosa' was grown in 1937 by Anth. Kluys in Boskoop as a seedling. Only from 1955 was the plant distributed. Hardiness zone: 4
