Crataegus × grignonensis

| Height | 5 - 6 m |
|-----------------------|---|
| Width | 3-4m |
| Crown | broad vase-shaped, half-open crown, capricious growing |
| Bark and branches | greyish-brown branches, seldom thorny |
| Leaf | oval to ovoid, somewhat leathery, dull green, 3 - 7 cm |
| Flowers | in umbels, while to pale pink, May/June |
| Fruits | round, Ø approx. 1.5 cm, glossy reddish-brown |
| Spines/thorns | Yes |
| Toxicity | usually not toxic to people, (large) pets and livestock |
| Soil type | makes few demands, preferably not too dry |
| Paving | tolerates no paving |
| Winter hardiness zone | 5a (-28,8 to -26,1 °C) |
| Wind resistance | moderate |
| Other resistances | resistant to frost (WH 1 - 6) |
| Fauna tree | resistant to frost (WH 1 - 6), provides food for birds |
| Application | avenues and broad streets |
| Application | |
| Shape | clearstem tree |
| | clearstem tree France, circa 1873 |

This cross between C. crus-galli and C. pubescens grows into a small tree approx. 6 m tall with a dense and broad vase-shaped crown. The greyish-brown branches are practically without thorns. The oval to ovoid leaves have 2 - 4 lobes and are slightly leathery. The upper side is dull dark green, the underside light green. In the autumn the leaves remain a long time on the tree, often until well into December. White flowers in umbels appear in May and June. They are followed by glossy reddish-brown fruits approx. 1.5 cm in diameter. They stay on the tree until the first frost. The tree needs good anchoring because of its weak root system. Preferably on wind-free sites in parks and small streets.
