## Hamamelis mollis

5 m
4-5m
round/spherical, dark, dense crown, capricious growing
brown, grey
green
yellow
golden-yellow, flowers in December
brown
None
usually not toxic to people, (large) pets and livestock
loamy soil, sandy soil, peaty soil, acid soil
tolerates no paving
6b (-20,5 to -17,8 °C)
moderate
resistant to frost (WH 1 - 6)
tree containers, small gardens, patio gardens
clearstem tree, feathered tree, multi-stem treem

Large, broad shrub up to 5 m tall, with dense, rather tangled branches. The young twigs are grey-brown with soft hairs. The obovate to round leaf is matt green and bears soft hairs. In the autumn it turns yellow. The leaf measures 10 to 13 cm. The flowers grow in compact clusters of axillary racemes. The individual flowers measure up to about 4 cm and consist of 4 narrow, golden yellow petals and a brownish red calyx. They open from December and into January. Seeds were sent from China to Britain in 1879, but it took 20 years before the qualities of this species were discerned.
