

Juglans regia 'Purpurea'

Height	5 m
Width	2-3m
Crown	round/spherical, half-open crown
Bark and branches	grey
Leaf	reddisch brown, red, feathered leaf
Flowers	redbrown, flowers in May
Fruits	edible fruits, brown
Spines/thorns	None
Toxicity	usually not toxic to people, (large) pets and livestock
Soil type	clayed soil, loamy soil, sandy soil, calcareous soil
Paving	tolerates no paving
Winter hardiness zone	7 (-17,7 to -12,3 °C)
Wind resistance	good
Other resistances	can withstand wind
Application	avenues and broad streets, small gardens
Shape	clearstem tree

Slow growing, small tree with an irregular, round crown, up to about 5 m tall. The young twigs are purplish red, mature branches and the bark light grey and grooved. The imparipinnate leaf grows 20 - 30 cm long and consists of 5 - 9 leaf segments. These emerge glossy red but turn matt purplish red in summer. The blossom and fruit are typical of the species, but 'Purpurea' does not generally bear many fruits. Is notably less hardy than other J. regia cultivars. Roots very deeply and much prefers easily penetrable, open soil.
