

Magnolia ×brooklynensis

'Woodsman'

| | |
|------------------------------|--|
| Height | 4 m |
| Width | 2-4m |
| Crown | flatened spherical, dark, dense crown, capricious growing |
| Bark and branches | brown, grey |
| Leaf | green |
| Flowers | voiletpink, flowers in April, fragrant flowers |
| Fruits | inconspicuous |
| Spines/thorns | None |
| Toxicity | usually not toxic to people, (large) pets and livestock |
| Soil type | clayed soil, loamy soil, sandy soil, peaty soil, acid soil |
| Paving | tolerates partial paving |
| Winter hardiness zone | 6 (-23,3 to -17,8 °C) |
| Wind resistance | good |
| Other resistances | resistant to frost (WH 1 - 6), can withstand wind |
| Application | avenues and broad streets, small gardens |
| Shape | feathered tree |

Grows from a shrub into a small tree with a broad, ovoid to flat-topped spherical crown with a height of about 4 m. The flower buds only develop in spring, so they cannot freeze in the winter. Depending on the temperature, the fragrant flowers open around mid-April. They are up to 15 cm in diameter and have an unusual but extremely attractive colour pattern. The outer petals are soft greenish-yellow to light olive green and the inner petals are a soft purplish pink. The inside of the leaves is cream.
