

## Magnolia sieboldii

|                              |                                                            |
|------------------------------|------------------------------------------------------------|
| <b>Height</b>                | 4 m                                                        |
| <b>Width</b>                 | 3-4m                                                       |
| <b>Crown</b>                 | round/spherical, dark, dense crown, capricious growing     |
| <b>Bark and branches</b>     | brown, grey                                                |
| <b>Leaf</b>                  | green                                                      |
| <b>Flowers</b>               | white, flowers in June, fragrant flowers                   |
| <b>Fruits</b>                | red, pink                                                  |
| <b>Spines/thorns</b>         | None                                                       |
| <b>Toxicity</b>              | usually not toxic to people, (large) pets and livestock    |
| <b>Soil type</b>             | clayed soil, loamy soil, sandy soil, peaty soil, acid soil |
| <b>Paving</b>                | tolerates no paving                                        |
| <b>Winter hardiness zone</b> | 6 (-23,3 to -17,8 °C)                                      |
| <b>Wind resistance</b>       | moderate                                                   |
| <b>Other resistances</b>     | resistant to frost (WH 1 - 6)                              |
| <b>Fauna tree</b>            | resistant to frost (WH 1 - 6), valuable for butterflies    |
| <b>Application</b>           | tree containers, small gardens, patio gardens              |
| <b>Shape</b>                 | clearstem tree, multi-stem treem                           |

Large, densely branching shrub, growing after many years into a small tree with a round crown. Grows to around 4 m high and wide. The obovate to elliptical leaves are blue-green in colour, especially on young shoots. The large, nodding flowers, about 10 cm in size, only open around late June/early July. They have a delightful, citrus-like fragrance and consist of 9 pure white petals. The pistils are green but the stamens are pink with dark red, contrasting beautifully with the white flowers. A splendid species from China, Korea and Japan. Its shrub-like nature makes it suitable for parks and gardens.
