

Malus 'Evereste'

Height	5 - 6 (8) m
Width	4-6m
Crown	broad pyramidal, half-open crown
Bark and branches	hairless, dark brown
Leaf	oval, dark green, 6 - 8 cm
Autumn colour	yellow, orange
Flowers	pure white, single, dark purplish-red in bud, May
Fruits	orange-red to red, Ø up to 2.5 cm, remain hanging for a long time
Spines/thorns	None
Toxicity	usually not toxic to people, (large) pets and livestock
Soil type	nutritious, well drained soil
Paving	tolerates paving
Winter hardiness zone	5 (-28,8 to -23,4 °C)
Wind resistance	good, susceptible to sea wind
Other resistances	resistant to frost (WH 1 - 6), can withstand wind
Fauna tree	resistant to frost (WH 1 - 6), can withstand wind, provides food for birds
Application	tree containers, roof gardens, industrial areas, small gardens, patio gardens
Shape	clearstem tree, multi-stem treem
Origin	INRA, Angers, France, 1978

Small tree with a pyramidal crown that later broadens out. The branches spread wide, becoming somewhat pendulous later. The twigs and bark are hairless and dark brown. The slightly lobed and dark green leaves remain in the tree for a long time in the autumn, turning to yellowish-orange. The flowers, almost 6 cm in size, grow in bundles of 4 to 8 together. In the bud the flowers are dark purplish-pink but they turn bright white when open. 'Evereste' produces abundant orange-red to red fruits with a diameter of up to 2.5 cm that remain hanging in the tree until far into the winter. Can be used in gardens, parks and public gardens, but only in verges as a street tree. The tree grows best in nutritious, not too dry soil. Free of mildew and scab. Allowing a solitary planted shrub to grow into a multi-trunked tree can produce an attractive effect.
