

Prunus 'Hally Jolivette'

Height	3-5 m
Width	3-5m
Crown	round/spherical, dark, dense crown
Bark and branches	brown
Leaf	green
Autumn colour	orange, red
Flowers	white, pink, flowers in April
Spines/thorns	None
Toxicity	usually not toxic to people, (large) pets and livestock
Soil type	all
Paving	tolerates no paving
Winter hardiness zone	6 (-23,3 to -17,8 °C)
Wind resistance	moderate
Other resistances	resistant to frost (WH 1 - 6)
Fauna tree	resistant to frost (WH 1 - 6), valuable for bees (honey plant)
Application	small gardens, patio gardens
Shape	clearstem tree, feathered tree, multi-stem tree

'Hally Jolivette' is a large shrub with an almost round crown of 3-5 m in height and at least as wide. The crown is densely branched with many, thin twigs. The egg-shaped leaves are 4-6 cm long and dark green. With a diameter of 2-2.5 cm, the flowers are relatively large. They are very pale pink, almost white and semi-double to double. Towards the end of flowering, a dark heart becomes visible in the flowers. The flowers open from the second week in April until the end of April. Because not all the flowers open at the same time, the flowering time is, for an ornamental cherry, relatively long.

If grafted on a tall stem, the compact round crown comes into its own and, because of its small size, 'Hally Jolivette' is fine for use in narrower streets and squares.

'Hally Jolivette' was introduced in 1940 by the Arnold Arboretum in Boston, USA. Hardiness zone 6.
