

Pyrus communis 'Peradel'

Height	6-8 m
Width	5-7m
Crown	pyramidal, half-open crown
Bark and branches	brown
Leaf	green
Flowers	white, flowers in April
Fruits	edible fruits, roze, greenbrown
Spines/thorns	None
Toxicity	usually not toxic to people, (large) pets and livestock
Soil type	clayed soil, loamy soil, sandy soil, calcareous soil
Paving	tolerates partial paving
Winter hardiness zone	5b (-26,0 to -23,4 °C)
Wind resistance	good, also on the coast
Other resistances	resistant to frost (WH 1 - 6), can withstand wind
Fauna tree	resistant to frost (WH 1 - 6), can withstand wind, provides food for birds
Application	small gardens, patio gardens
Shape	clearstem fruit tree

PERADEL is a strong-growing pear tree with a pyramidal, semi-open crown of 6-8 m in height. The stem branches grow steeply upwards. The tree flowers with white blossoms around mid-April. PERADEL is not self-pollinating, which means that a tree of another pear variety should be nearby for good fruiting. Preferably, 'Doyenné du Comice' or 'Williams' is used for this purpose. PERADEL pears are medium to large and relatively wide. The skin is pale green with a bronze to pinkish blush. The flesh is meltingly soft, aromatic and tastes pleasantly sweet. The pears are ready for picking from mid-September to early October. PERADEL is a hand pear, suitable for direct consumption or storage. PERADEL is a French cultivar. The tree generally produces a lot of fruit and has no rotation years, guaranteeing annual production. Hardiness zone 5b.
