

Tilia mongolica 'Buda'

Height	8-12 m
Width	7-10m
Crown	broad ovoid, dark, dense crown
Bark and branches	brown, grey
Leaf	green
Autumn colour	yellow
Flowers	cream white, flowers in June
Fruits	green, grey
Spines/thorns	None
Toxicity	usually not toxic to people, (large) pets and livestock
Soil type	all
Soil moisture	suitable for dry soil
Paving	tolerates partial paving
Winter hardiness zone	5 (-28,8 to -23,4 °C)
Wind resistance	good
Other resistances	resistant to frost (WH 1 - 6)
Fauna tree	resistant to frost (WH 1 - 6), valuable for butterflies
Application	avenues and broad streets, small gardens
Shape	clearstem tree, multi-stem treem

'Buda' is a medium-sized tree with a dense crown to about 12 m high, slightly higher under favourable conditions. The tree has a regularly shaped crown. The young twigs, especially on the sunny side, are red-brown. The old bark is grey-brown and remains smooth for a long time. Only later in life is the bark grooved. Too tips of the branches and twigs hang down slightly, gracefully distinguishing 'Buda' from the species *T. mongolica*. The leaves are quite small and heart-shaped to triangular. Unlike the species *T. mongolica*, whose leaves are usually lobed, the leaf edges of 'Buda' are serrated. The shiny dark green leaves turn yellow in autumn.
